

SVG in HTML

SVG defines vector-based graphics in XML format.

You can use SVG in DFF documents by using svg images as img source or by adding svg directly to the document.

For more information on Compart supported SVG elements see the [SVG conformance list](#).

The examples below are adapted from W3Schools. For a beginner's introduction into SVG, see [SVG Tutorial](#)

This is sample code provided for demonstration purposes or to assist your development.
Sample code is provided "as is" and is not supported by Compart.
Sample code is not intended to be indicative of the quality or usability of Compart products.
