

CSS Styled TOC

Counters for HTML elements can be defined in CSS similar to variables. Counters first have to be initialized, then they are used until the document ends or the counter is reset. Counters can also be nested.

The example below demonstrates how counters can be set for h2 and h3 elements, and how a simple CSS styled TOC can be added.

Manually Created TOC

1 Milk ice

1.1 Vanilla

1.2 Chocolate

2 Fruit ice

2.1 Strawberry

2.2 Mango

3 House specials

3.1 Ginger

3.2 Wasabi

Heading Counters

1 Milk ice

1.1 Vanilla

1.2 Chocolate

2 Fruit ice

2.1 Strawberry

2.2 Mango

3 House specials

3.1 Ginger

3.2 Wasabi
