

Heading Counters

Counters for HTML elements can be defined in CSS similar to variables. Counters first have to be initialized, then they are used until the document ends or the counter is reset. Counters can also be nested.

The example below demonstrates how counters can be set for h2 and h3 elements, and how different counter styles can be used.

Heading Counters

Section 1 Milk ice

1.1 Vanilla

1.2 Chocolate

Section 2 Fruit ice

2.1 Strawberry

2.2 Mango

Section 3 House specials

3.1 Ginger

3.2 Wasabi

Counters With Roman Numerals

Section II Milk ice

II.ii Vanilla

II.iv Chocolate

Section IV Fruit ice

IV.ii Strawberry

IV.iv Mango

Section VI House specials

VI.ii Ginger

VI.iv Wasabi
