

# List Counters

Counters for HTML elements can be defined in CSS similar to variables. Counters first have to be initialized, then they are used until the document ends or the counter is reset. Counters can also be nested.

The example below demonstrates how counters can be set for div and ol elements, and how different counter styles can be used.

## Custom div List

- 1 Vanilla
- 2 Chocolate
- 3 Coconut

## Nested ol Counters

- 1 Milk ice
  - 1.1 Vanilla
  - 1.2 Chocolate
  - 1.3 Coconut
- 2 Fruit ice
  - 2.1 Strawberry
  - 2.2 Raspberry
  - 2.3 Mango
- 3 House specials
  - 3.1 Ginger
  - 3.2 Wasabi
  - 3.3 Green tea
