Cross References to Headings

In print output, cross references should be more than links to ensure that readers can still follow the links when the documents are printed. The links often mention the target section number or the target page.

Cross References to Heading Counters

The example below demonstrates how cross references to h2 elements with counter can be used in the text. Section is generated as text before the counter reference.

This text is about ice cream. There are various types of ice cream. For more information about milk ice see section 1, about fruit ice see section 2, and about house specials see section 3.

Cross References to Heading Texts

The example below demonstrates how cross references to h2 elements with counter can be used in the text. The link text points to counter and heading title.

This text is about ice cream. There are various types of ice cream. For more information about milk ice see 1 Milk ice, about fruit ice see 2 Fruit ice, and about house specials see 3 House specials.

Cross References to Headings on Pages

The example below demonstrates how cross references to h2 elements with counter can be used in the text. The link text points to the heading counter and text on the page.

This text is about ice cream. There are various types of ice cream. For more information about milk ice see 1 Milk ice on page 2, about fruit ice see 2 Fruit ice on page 2, and about house specials see 3 House specials on page 2.
